

## FOR US, GREEN IS MORE THAN JUST A COLOR.

### AIR POLLUTION

Greenlam laminates are GREENGUARD certified for indoor air quality as they emit less than 0.1 ppm of total aldehydes. Greenguard gives the building process an eco friendly trust and assurance and qualifies it for LEED credits. Greenlam even meets the stringent VOC emission norms for Schools and Children thus supporting a pollution free environment for education establishments.

### ALTERNATIVE FUEL

Greenlam uses innovative technology to run its manufacturing facility on alternative fuels thereby completely eliminating the use of natural gas or other petroleum products in its boilers. Greenlam uses Bio Mass (recycled agricultural waste) as fuel.

### REDUCING THE CARBON IMPRINT

Greenlam's efforts in the environmentally friendly manufacturing process has earned it \$800,000 worth of carbon credits. Greenlam has been in the forefront of reforestation campaigns and has a dedicated team working year-round to plant new seedlings in the forests of India. Greenlam uses stainless steel plates instead of paper to impart surface on the majority of laminates it produces.

### RECYCLING

Portions of damaged sheets of non-decorative laminate are used as protective barriers on top of stacks of laminate ready to be shipped. Rolls of Kraft paper are unwound and saturated with phenolic resin, dried and are cut to a uniform length in preparing this paper to become the underlying core of our laminate. This paper contains 40% recovered material (byproducts from lumber operations). The corrugated cores on which our papers arrive are recycled into other cardboard products.

### MATCHING ABS EDGEBOARDING

Lamineer stocks a wide range of matching ABS edgebanding tapes for the Greenlam product line. ABS (Acrylonitrile-Butadiene-Styrene) is quickly replacing PVC as the material of choice for Edgebanding materials in North America, and is the edgebanding choice in Europe. ABS Edgebanding has many environmental and practical processing advantages over PVC. Some of these advantages include:

#### ENVIRONMENTAL ADVANTAGES

- No Chlorine
- No heavy metals
- No formaldehyde

#### PRACTICAL PROCESSING ADVANTAGES

- Higher heat resistance
- Lighter in weight
- Higher impact resistance than PVC
- Can be incinerated or disposed with general waste
